DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 7,8,14-17 recites the limitation "wells" in the independent claims 1 and 11.

There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States; (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,3,5,9,10,11, are rejected under 35 U.S.C. 102(b) as being anticipated by USP 5,290,701 (Wilkins).

Wilkins discloses a system for optically monitoring the growth of microorganisms contained in a plurality of growth chambers without having to remove the chambers from the incubator to make the optical observation. The system comprises an incubator (60) containing an indexing table supporting (25) which supports a plurality of culture cells (24) which can be individually monitored by a close-up lens (21) contained within the incubator (60) and connected to a video processor (18) and computer (11) with an

image display (12). The computer processing includes recording and supplying information of microorganism growth patterns during the incubation process with indication and analysis being made for the first growth, rate of growth, and final growth pattern density (see description of figure 1 and col.3, lines 19-31).

Claims 1-3,5-12,14-17 are rejected under 35 U.S.C. 102(e) as being anticipated by 2002/0068358 (Campbell et al.).

The Campbell et al. publication discloses a device comprises a carrier having a plurality of wells for each housing an embryo, the carrier being positioned within an incubator for controlling the environment conducive to the growth of the embryo. The reference also discloses that each well is equipped with an imaging device for monitoring the growth of the embryo (see "Summary of the Invention" section).

Allowable Subject Matter

Claims 4 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Response to Arguments

Applicant's arguments concerning the rejection in view of Bisconte are persuasive and therefore the rejection withdrawn.
